Introduction

We welcome you to the sixth edition of the Thomas B. Fordham Institute’s *Ohio Education by the Numbers*. This guidebook offers policymakers, journalists, and civic and business leaders easy-to-use statistics—sans commentary—about Ohio’s K-12 schools and the students they serve. This edition includes the most recent data available through November 2022.

The following tables and charts describe education in Ohio at a high level—they are not an evaluation of state policies or school practices. Note also that some of these data, most notably the 2020-21 and 2021-22 national and state assessment results, were impacted by the learning disruptions associated with the pandemic. Nevertheless, a basic understanding of historical trends, as well as the current status of K-12 education, can help us make more informed decisions about ways to improve education for Ohio’s students.
We thank our Fordham colleagues who contributed their time and talents to this endeavor, including Jeff Murray and Jessica Poiner. Special thanks to Stephanie Henry who designed the publication. Feel free to contact the report author, Aaron Churchill (achurchill@fordhaminstitute.org), if you have questions about the data or have suggestions about how to improve future editions.

If you are using a hard copy version of the report, the primary data sources (displayed in blue font) can be accessed via our companion website www.ohiobythenumbers.com. The website also includes downloadable versions of this year’s report along with prior editions.

CHAD L. ALDIS  Vice President for Ohio Policy
AARON CHURCHILL  Ohio Research Director
Student Enrollment
Ohio Public School Students

Ohio has 1.6 million public school students of varying backgrounds and characteristics.

Public School Enrollment Trends

Since 2005-06, overall public school enrollment has declined by nearly 10 percent. Enrollment for Ohio’s largest race/ethnic student groups, white and African American students, has also declined.

Note: The percentages refer to the percent change from 2006 to 2022. The chart displays the spring part of the school year, a convention often used in this guide.
Public School Enrollment Trends

Since 2005-06, public school enrollment has increased significantly among Hispanic, multiracial, and Asian/Pacific Islander students.

Note: The percentages refer to the percent changes from 2006 to 2022.
Public School Enrollment Trends by Selected Characteristics

Since 2005-06, English learner enrollment has more than doubled, while the number of students with disabilities has remained consistent. The number of students identified as gifted has declined.

Note: The percentages refer to the percent changes from 2006 to 2022.
Low Income Students

The percentage of students identified as economically disadvantaged has increased since 2005-06. However, the percentage of Ohio children living in poverty has not increased.

Source: Economically disadvantaged data are from Ohio Department of Education, Advanced Reports (2005-06 to 2021-22); childhood poverty data are from the Annie E. Casey Foundation, Kids Count Data Center and based on U.S. Census poverty estimates (data were not reported for 2020 and are not yet available for 2022). Notes: Ohio identifies students as “economically disadvantaged” via federal meal programs, open to pupils from households with incomes at or below 185% of federal poverty. However, in 2010, Congress passed the Community Eligibility Provision which allows certain schools to deem all students as disadvantaged (even higher-income children) for the purposes of meals eligibility. In contrast, children in poverty are from households at or below 100% federal poverty.
Ohio 2013 School Districts and Typologies

For analytic purposes, ODE categorizes districts into eight typologies based on their geographic and socio-economic characteristics. This publication displays various statistics by typology to illustrate patterns of enrollment and achievement across the state.

LEGEND

- Urban: Very High Student Poverty
- Urban: High Student Poverty
- Small Town: High Student Poverty
- Small Town: Low Student Poverty
- Rural: High Student Poverty
- Rural: Average Student Poverty
- Suburban: Low Student Poverty
- Suburban: Very Low Student Poverty

**Sources:** Ohio Department of Education, *School District Typology*. **Note:** This map displays the border of each district and its corresponding typology.
Public School Students by Typology

28 percent of Ohio students reside in urban areas and 34 percent are from suburban communities; 21 percent live in small towns while 15 percent are from rural areas.

Source: Calculations based on Ohio Department of Education (ODE) downloadable files titled “District and Building Overview” (2021-22). Note: Public charter and STEM schools are assigned to the typology of the district in which the school is located, as reported in ODE’s community school directory. Online charters—also known as e-schools—are not included in a typology, since they can enroll students statewide.
Public School Students in Urban Areas

Students living in urban areas come from various race and ethnic backgrounds, and more than eight in ten are identified as economically disadvantaged.

Public School Students in Suburban Areas

Students from suburban areas are majority white, with modest racial and ethnic diversity. About one in five suburban students are economically disadvantaged, the lowest percentage across Ohio’s typologies.

Note: Ohio Virtual Academy, a statewide e-school, is considered equivalent to a school district. This table does not include charter or STEM students as part of the district’s student population. Enrollment changes of less than +/- 1 percent are considered to have had no substantive change (marked as “--”).
## Enrollment by Educational Model

Roughly 80 percent of Ohio students attend traditional public school districts, while more than 110,000 students attend charter schools and more than 200,000 students attend non-public schools or homeschool.

<table>

Sources: Ohio Department of Education (ODE) downloadable file titled “Building Overview” was used to calculate enrollments for 2021-22 and the community school directory was used to identify the type of charter school. Historical enrollment data were drawn from ODE, Community School Annual Report: 2020-2021.
Characteristics of Charter Students

Roughly 80 percent of charter students are economically disadvantaged, and a majority are Black or Hispanic. Of students attending brick-and-mortar charters, almost 95 percent are from urban areas.

Source: Ohio Department of Education, Advanced Reports (2021-22). Note: All statistics in this table, except for the district typology data, include statewide e-schools. Online charters draw students from all areas of the state, so they are not assigned to district typologies.
Interdistrict Open Enrollment

Four in five Ohio districts participate in interdistrict open enrollment. Approximately 80,000 students open enroll, with participation generally increasing over time.

Sources: Two sources were used for this chart, based on the availability of data. For 2002-03 to 2011-12, data from the Ohio Auditor of State’s report, *Weighing the Costs and Benefits of Open Enrollment* were used. For 2012-13 to 2021-22, enrollments are calculated based on school districts’ funding reports; see ODE, *Traditional Public Schools Funding*. The decrease in 2021-22 enrollments may be due to a slight reporting change.
Private School Scholarships

More than 77,000 students use state-funded scholarships (often referred to as vouchers) to attend private schools. Student participation has increased over time.

Source: Historical data through 2020-21 are from American Federation for Children, School Choice Yearbook (2021). ODE began recently reporting more detailed voucher data and the 2021-22 numbers are from Advanced Reports. Note: The chart displays the total number of students in the various scholarship programs. For more information on each program, see Ohio Department of Education’s webpage, Scholarships.
Homeschooling

Nearly 50,000 Ohio students participate in homeschooling; the number of homeschoolers significantly increased in 2020-21 but dipped in 2021-22.

Source: Ohio Department of Education, Homeschool Student Data. Note: Students attending online charter schools are not considered homeschool students.
Student Achievement: National Exams
National Exams: NAEP 2022

Approximately 30 to 40 percent of Ohio students reach the national standard for proficiency, just above the national average.

Source: National Assessment of Educational Progress, Data Explorer (2022). Note: The figure displays proficiency rates—the percentage of students achieving NAEP’s rigorous proficiency benchmark. The National Assessment of Educational Progress (NAEP), considered the "Nation’s Report Card," is administered to a representative sample of fourth and eighth grade students in each state every two years in reading and math.
Ohio Compared to Other States

Nationally, Ohio ranks between 11th and 20th in fourth and eighth grade math and reading. Ohio’s national position has typically been between 10th and 20th for the past two decades.

**Source:** Ohio Department of Education, Advanced Reports. **Note:** Data for 2019-20 are not displayed due to test cancellations in spring 2020.
Post-Secondary Readiness and Outcomes
ACT Scores Over Time

Ohio’s average ACT composite score fell significantly beginning with the class of 2018, when all Ohio juniors began taking a college admissions exam. Ohio’s ACT scores have declined further since 2018.

Source: ACT, U.S. High School Graduating Class Trends; for historical data, see, e.g., ACT, Graduation Class of 2014—Ohio. Note: This chart displays the average ACT composite score on all four tested subjects (English, math, reading, and science). About three in four Ohio students took the ACT exams in the classes of 2005-17, while practically all students in the classes of 2018-20 did so. Participation was somewhat lower for the classes of 2021-22 (roughly 80-85 percent). Composite scores are reported on a scale of 0 to 36.
Average ACT Scores by Race/Ethnicity

Large gaps in average ACT scores exist between race/ethnic groups; disparities have not narrowed significantly over the past decade.

Source: ACT, U.S. High School Graduating Class Trends; for historical data, see, e.g., ACT, Graduation Class of 2014—Ohio. Note: ACT reports data for several smaller race/ethnic student groups that are not displayed on this figure.
ACT Exam: College Readiness of the Class of 2022

College readiness varies by ACT content area—from 30 percent in math and science to 48 percent in English. Just 20 percent of Ohio students reach college ready benchmarks in all four areas of the ACT.

Source: ACT, U.S. High School Graduating Class Trends. Note: ACT establishes minimum test scores in each subject that indicate readiness for college coursework in that area. For more on the college-ready benchmarks, see ACT, What are the ACT College Readiness Benchmarks? These benchmarks are used by the Ohio Department of Higher Education to determine incoming college students' remediation-free status.
Industry Credentials

Just 8 percent of students earn twelve points in Ohio’s industry credentialing system before graduating. Students from rural schools have the highest rates of credentials earned (13 percent), while those from suburban schools have the lowest (5 percent).

Source: Calculations based on Ohio Department of Education downloadable files titled “District and Building College, Career, Workforce and Military Readiness Data” (2021-22). Note: The rates indicate the percentage of students earning 12 or more points in Ohio’s industry credentialing system. Data are from the class of 2021, including non-graduates. The typology averages are weighted by the number of students in this class in each district, charter, or STEM school.
Advanced Placement (AP) Scores

14 percent of Ohio students pass at least one AP exam. 31 percent of students from suburban schools earn a passing score, while only 4 percent of rural students do so.

Source: Calculations based on Ohio Department of Education downloadable files titled “District and Building College, Career, Workforce and Military Readiness Data” (2021-22). Note: The rates indicate the percentage of students earning a score of at least 3 out of 5 possible points on one or more AP exams. Students who do not take an AP exam are included in the denominator. Data are from the class of 2021, including non-graduates. The typology averages are weighted by the number of students in this class in each district, charter, or STEM school.
Dual Enrollment Credit

13 percent of Ohio students earn twelve or more college credits through dual enrollment programs. Almost one in five students from small town and rural schools earn twelve or more credits, while less than 10 percent of urban students do so.

Source: Calculations based on Ohio Department of Education downloadable files titled “District and Building College, Career, Workforce and Military Readiness Data” (2021-22). Note: The rates indicate the percentage of students earning 12 or more college credits through a dual high school/college enrollment program. Data are from the class of 2021, including non-graduates. The typology averages are weighted by the number of students in this class in each district, charter, or STEM school.
Four-Year High School Graduation Rates

87 percent of Ohio students graduate high school in four years. Graduation rates exceed 90 percent in much of the state, with lower rates in urban schools.

Source: Calculations based on Ohio Department of Education downloadable files titled “District and Building Graduation Rates” (2021-22). Note: The graduation rates indicate the percentage of students in the class of 2021 who earned a high school diploma within four years of entering ninth grade. The typology averages are weighted by the number of students in this class in each district, charter, or STEM school.
Industry Credentials and AP Exam Trends

Attainment of industry credentials has increased substantially since 2014, while AP passage rates have risen slightly.

Source: Ohio Department of Education downloadable files titled “State College, Career, Workforce and Military Readiness Data” and “State Prepared for Success.” Note: To maintain consistency with historically reported dual enrollment rates, this page displays the percentage of students earning 3 or more dual enrollment credits (page 52 shows 12 or more credits).
College Enrollment Rates

Just shy of 50 percent of Ohio students enroll in two or four year colleges after high school. Enrollment is highest among students from suburban areas (69 percent) and lower in other regions.

Source: Calculations based on Ohio Department of Education downloadable files titled “District and Building College Readiness” (2021-22). Note: The chart displays the percent of the high school class of 2019 (including non-graduates) that enrolled in a two- or four-year college (Ohio or non-Ohio) within two years of high school. The typology averages are weighted by the number of students in this class in each district, charter, or STEM school.
College Completion Rates

31 percent of Ohio students attain at least an associate degree within six years of leaving high school. College completion rates are highest among students who attended high school in suburban areas (49 percent) and lower among those from other parts of Ohio.

Source: Calculations based on Ohio Department of Education downloadable files titled “District and Building College Readiness” (2021-22). Note: The chart displays the percent of the high school class of 2015 (including non-graduates) who earned at least an associate degree within six years of high school at an Ohio or non-Ohio college or university. The typology averages are weighted by the number of students in this class in each district, charter, or STEM school.
Trends in College Enrollment and Completion

College enrollment has decreased in recent years, while college completion rates remained largely flat for the classes of 2009-15.

Source: Ohio Department of Education downloadable files titled “State College, Career, Workforce and Military Readiness Data” and “State Prepared for Success.” Note: ODE began reporting post-secondary education data on the 2015-16 report card, so there is no enrollment data available prior to the class of 2013. Enrollment data for the classes of 2020 through 2022 has not yet been reported, nor completion data for the classes of 2016 through 2022.
Ohio’s Educators
Public School Teachers

Ohio public schools employ roughly 100,000 teachers, or about 16 students per teacher.

Source: DataOhio, Education Employee Positions and Demographics—Public (2021-22).

Note: Descriptions of staff positions are available at ODE, EMIS Manual, Section 3.9: Position Codes. Some classroom teachers may also serve as non-teaching staff (e.g., teachers who are athletics coaches or extracurricular advisors). Schools report part-time employees as fractional staff positions.
Teacher Salaries

On average, public school teachers in Ohio earn about $67,000 per year.

Source: Calculations based on Ohio Department of Education, District Profile Reports (2020-21).
Note: The typology averages are weighted by district enrollment in 2020-21; charter school data are not included in this figure because they are not included in the District Profile Reports. Salary data exclude healthcare and retirement benefits.
Administrator Salaries

Public school administrators—who include superintendents, principals, and treasurers—earn just over $85,000 per year on average.

Source: Calculations based on Ohio Department of Education, District Profile Reports (2020-21).
Note: The typology averages are weighted by district enrollment in 2020-21; charter school data are not included in this figure because they are not included in the District Profile Reports. Salary data exclude healthcare and retirement benefits.
Trends in Teacher and Administrator Salaries

Average teacher and administrator salaries declined between 2010 and 2015 but have increased overall since then.

Source: Ohio Department of Education, District Profile Reports (2005-06 to 2020-21).

Note: The 2005-06 to 2019-20 salary data were adjusted to 2021 price levels using the consumer price index (CPI).
School Funding
How Ohio Funds Public Schools

Ohio public schools receive approximately $26 billion per year via local, state, and federal tax revenues, with modest non-taxpayer support. State taxpayer funds provide 41 percent of total revenues, while local taxes contribute 43 percent. Federal and non-tax sources provide the rest.

Source: The total revenue amount for Ohio public schools is from U.S. Department of Education, Revenues and Expenditures for Public Elementary and Secondary Education: FY 20, Table 1. The breakdown of revenue by source is from the Ohio Department of Education, District Profile Reports (2020-21). Note: Other non-tax revenue includes sales of assets, fees, and investment income.
How Ohio Funds Public Schools: Trend Over Time

From 2006 to 2021, the state share of funding has been between 41 and 45 percent of total funding while the local and non-tax share has been between 47 and 52 percent of overall funding.

Source: Ohio Department of Education (ODE), District Profile Reports (2005-06 to 2020-21).
Note: Prior to 2012-13, ODE did not report revenue as “other non-tax,” a category that includes sales of assets, fees, and investment income. Previously, most of those revenues were reported as local funds.
Education in the State Budget

The state spends 43 percent of its overall budget on K-12 education. The share dedicated to education has generally risen since 2006.

Source: Ohio Legislative Service Commission, *Historical Revenues and Expenditures*, Table 2.
Note: This chart shows K-12 education spending as a percentage of the state’s general revenue fund, lottery profits education fund, and local government fund. It excludes federal dollars that are included in the overall state budget (including federal funds for K-12 education).
How Funds Are Spent

60 percent of education funding is spent on classroom instruction. The remainder supports administration, building operations, and support activities.

Source: Ohio Department of Education, District Profile Reports (2020-21). Note: The expenditure data shown in this chart do not include capital outlay (e.g., construction or interest on debt); see page 76 for those expenditures.
How Funds Are Spent: Salaries and Benefits

62 percent of public schools’ instructional expenditures are spent on salaries and 23 percent on benefits. Educator salaries have become a slightly smaller share of instructional spending since 2005, while benefits have remained largely consistent.

Source: U.S. Department of Education (USED), Revenues and Expenditures for Public Elementary and Secondary Education: FY 20, Table 6 and historical data are from USED, Digest of Education Statistics. Note: Benefits include spending on retirement, healthcare, worker’s compensation, and tuition reimbursement. Instructional spending on salaries and benefits do not equal 100% due to other expenses such as materials and curriculum development.
Expenditure Per Pupil

On average, Ohio schools spend just over $13,000 per pupil in overall operational expenditures. Urban districts have the highest per pupil expenditures ($15,021), while small town districts spend the least ($12,050 per pupil).

Source: Calculations based on data from the Ohio Department of Education, District Profile Reports (2020-21). Note: The average per-pupil expenditures for each typology are weighted by district enrollment in 2020-21. Charter schools are not included in these data, as they are not included in the District Profile Reports. The expenditure data used for this chart exclude capital outlay (e.g., construction or interest on debt).
Expenditure Per Pupil Compared to Nearby States

Ohio spends slightly more than the national average and more than most nearby states, but spends less than Illinois and Pennsylvania.

Source: U.S. Department of Education (USED), Revenues and Expenditures for Public Elementary and Secondary Education: FY 20, Table 4. Note: The chart displays operational expenditures per pupil (excluding capital expenses such as construction and interest on debt).
Public School Expenditures Over Time

Statewide, inflation-adjusted expenditures per pupil have remained consistent over the past decade. In 2020, spending was at its highest point during the period displayed below.

**Source:** Ohio Department of Education, *District Profile Reports* (2005-06 to 2020-21).

**Note:** Statewide expenditures per pupil for 2005-06 to 2019-20 are inflation-adjusted to 2021 dollars, using the Bureau of Labor Statistics *CPI Inflation Calculator*. 
Capital Outlay and Debt Service

Over the past decade, Ohio public schools have spent roughly $1.7 to $2.5 billion per year on capital outlay—expenditures on construction, land, and equipment—and approximately $500 million per year on interest on debt.

Source: U.S. Department of Education (USED), Revenues and Expenditures for Public Elementary and Secondary Education: FY 20, Table 7; historical data are from USED, Digest of Education Statistics. Note: Capital expenditures for 2005-06 to 2018-19 are inflation-adjusted to 2020 dollars, using the Bureau of Labor Statistics CPI Inflation Calculator.
